

# Beware

## There are bad apples out there.

And they don't care about your fifth wheel.

Genuine Fontaine

Fontaine parts come in a brown box with "Genuine Fontaine Parts" printed on the box. The Fontaine brand and model number is forged into the jaw and wedge.

- Reports indicate failures are occurring due to "non-genuine" jaw and wedge studs falling out at an early cycle time
- This can create a dangerous condition
- This defect is not an issue with a Genuine Fontaine jaw or wedge since each is a one-piece design with the stud as part of the casting (rather than a pressed in add-on item)
- Non-genuine components are easy to identify by the physical characteristics listed in the photo captions

**We do not support equipment that has been modified using "non-genuine" parts.**

**Modifying Fontaine equipment voids your warranty.**

Bad Apple

The non-genuine parts come in a white box and jaw and wedge studs are pressed/glued into the forging. A picture of the failed part is shown above.
